ABOUT ME

Aspiring Full Stack Developer with a strong foundation in C, Java, and Python, and hands-on expertise in full-stack development, database-driven data management, and AI/ML. Skilled in designing scalable applications, structuring and managing MySQL databases, and optimizing performance to deliver reliable, production-ready solutions. Blending creativity with engineering precision to build systems that feel like glimpses of the future.

EDUCATION

- **ACE Engineering College** — Bachelor's in Computer Science and Engineering
CGPA - 9.34 till 6th sem, 2023 - present

CERTIFICATIONS

- NPTEL: Java, Python
- Cisco Python Essential 1, Essential 2
- Cisco CCNA, ENSA, SRWE
- Oracle Cloud Infrastructure DevOps Professional

TECHNICAL SKILLS

- Programming: C, Java, JavaScript, Python, SQL, React
- Web Technologies: HTML, CSS
- Data Management & Platforms: Distributed Systems, MySQL
- Tools & Platforms: GitHub, MySQL Workbench, Flask
- AI/ML: Random Forest Model, Image Classification

INTERNSHIPS

Networking Virtual Internship — Juniper Networks

Gained practical exposure to networking and cloud technology. Acquired knowledge of network and cloud architecture as well as automation concepts.

PROJECTS

Credit Card Fraud Detection using ML

Duration: 2 months | Team Size: 3

Designed and implemented a scalable machine learning-based system that detects fraudulent credit card transactions by analyzing transaction patterns and user behavior using supervised learning algorithms. Addressed class imbalance using SMOTE and optimized models through hyperparameter tuning, improving fraud detection with ensemble methods. Evaluated performance using ROC-AUC and confusion matrix analysis, improving transaction security and reducing financial losses.

Crop Disease Detection

Duration: 3 months | Team Size: 3

Developed an AI-powered, image-based disease detection system using image processing and machine learning/computer vision techniques to accurately identify and classify diseases in plant leaves. The system analyzes crop images to detect infected areas and classify diseases accurately, helping farmers take early preventive measures, improve crop quality, reduce losses, and increase agricultural productivity.

FIELD OF INTEREST

- Software Engineering
- Data Visualization

CURRICULAR ACTIVITIES

- Active NSS Volunteer
